

# import in eclipse

2019年3月29日 下午 07:24

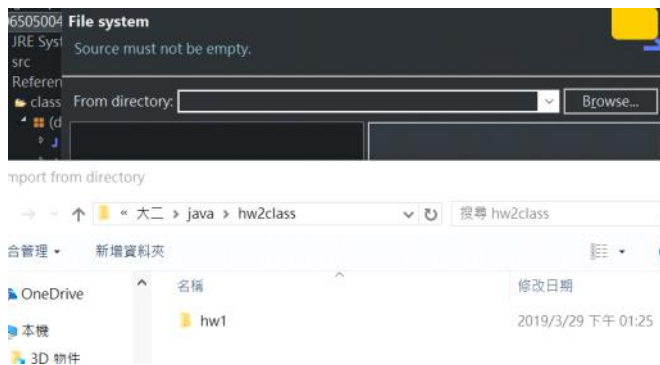

import .java

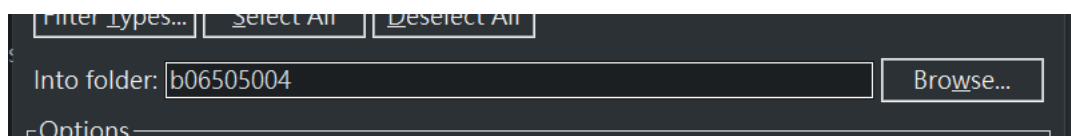

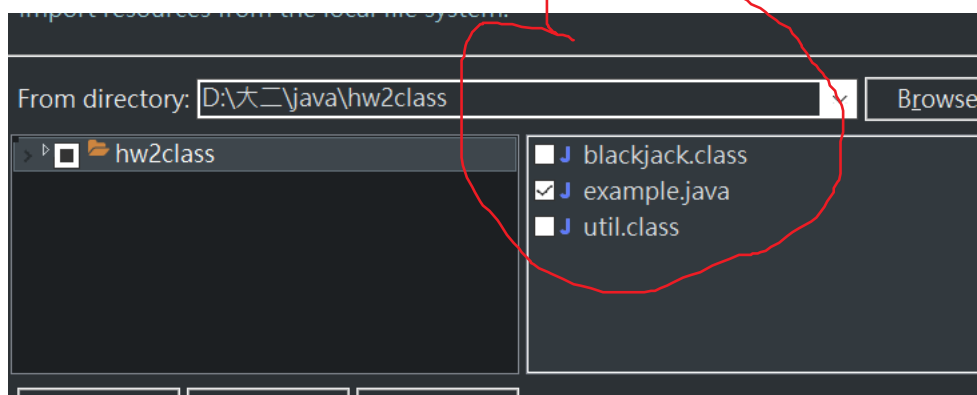

right click project => import (project 指要將資料加入的 b06505004 是專案名 hw2 規定要取學號)

file system(此時不會顯示資料夾中內容....)

choice from where into where(選後內容就出現)

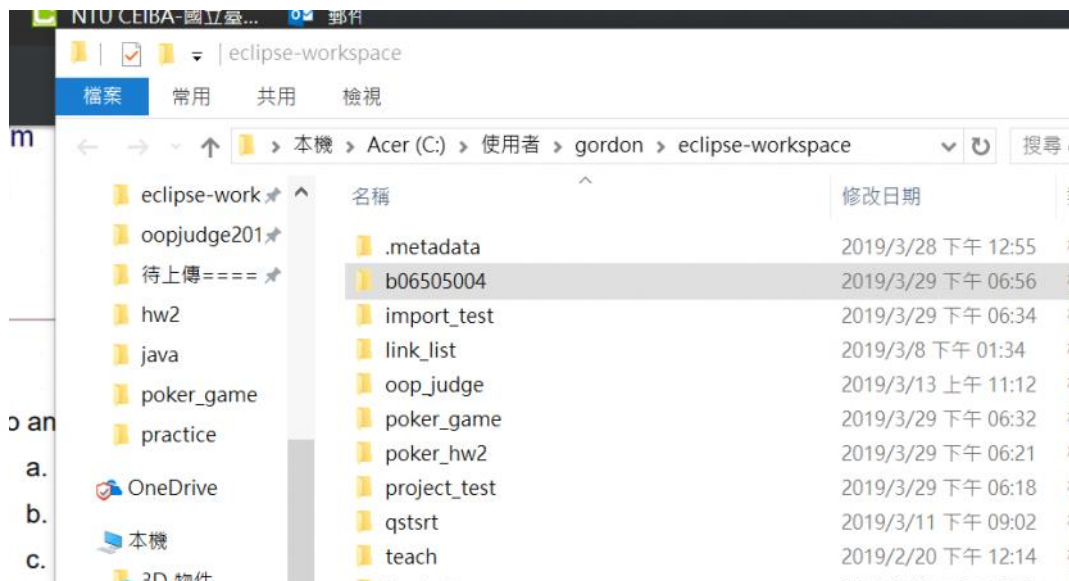

finish

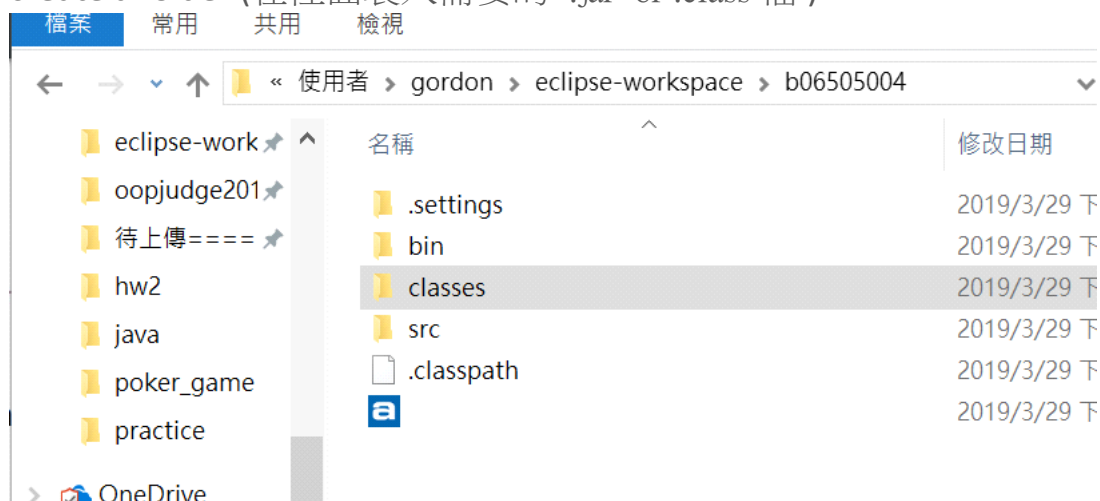

import .class or .jar (複製一份新的裝在專案中 的方法)

right click project => show in => System explorer

find where your project is

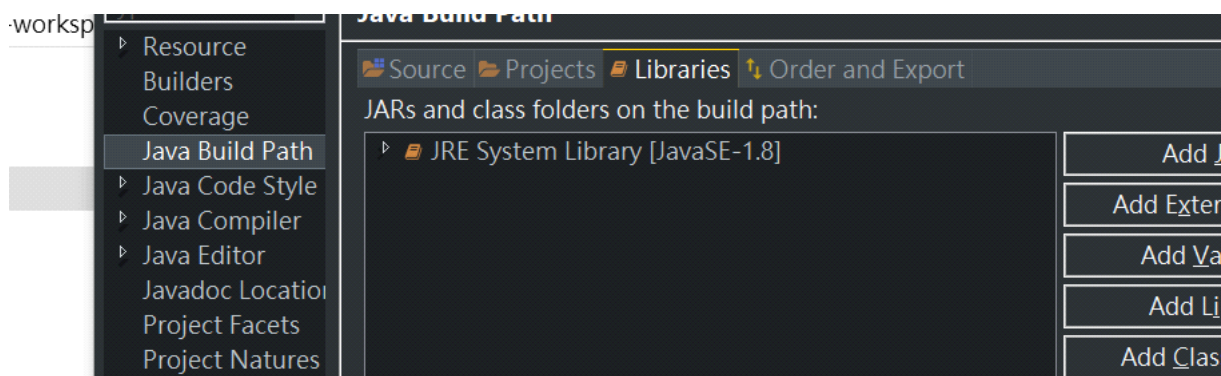

create a folder (在裡面裝入需要的 .jar or .class 檔)

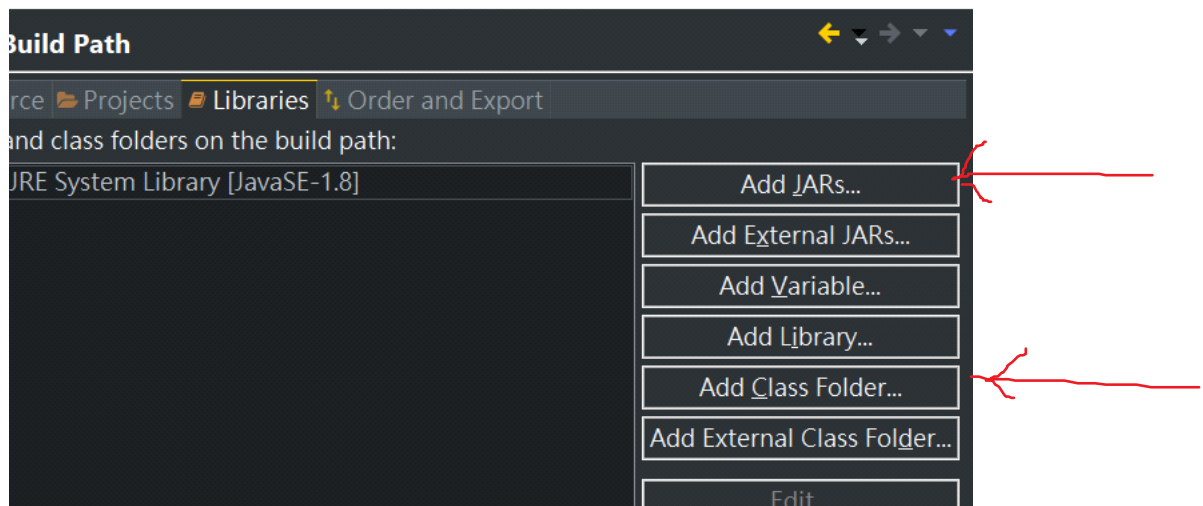

return to eclipse right click project => refresh(剛才的更動顯現了)

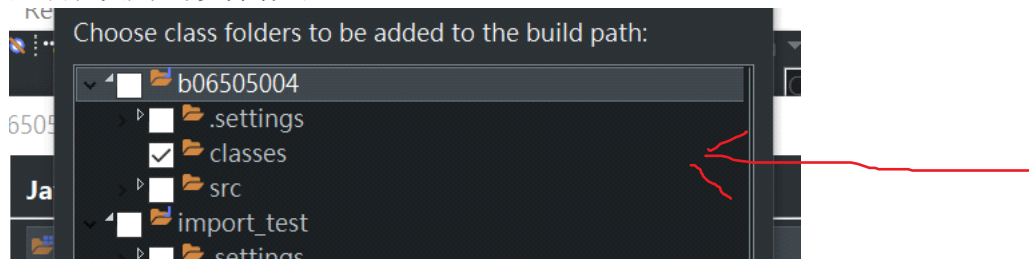

right click project => property ==> java build path

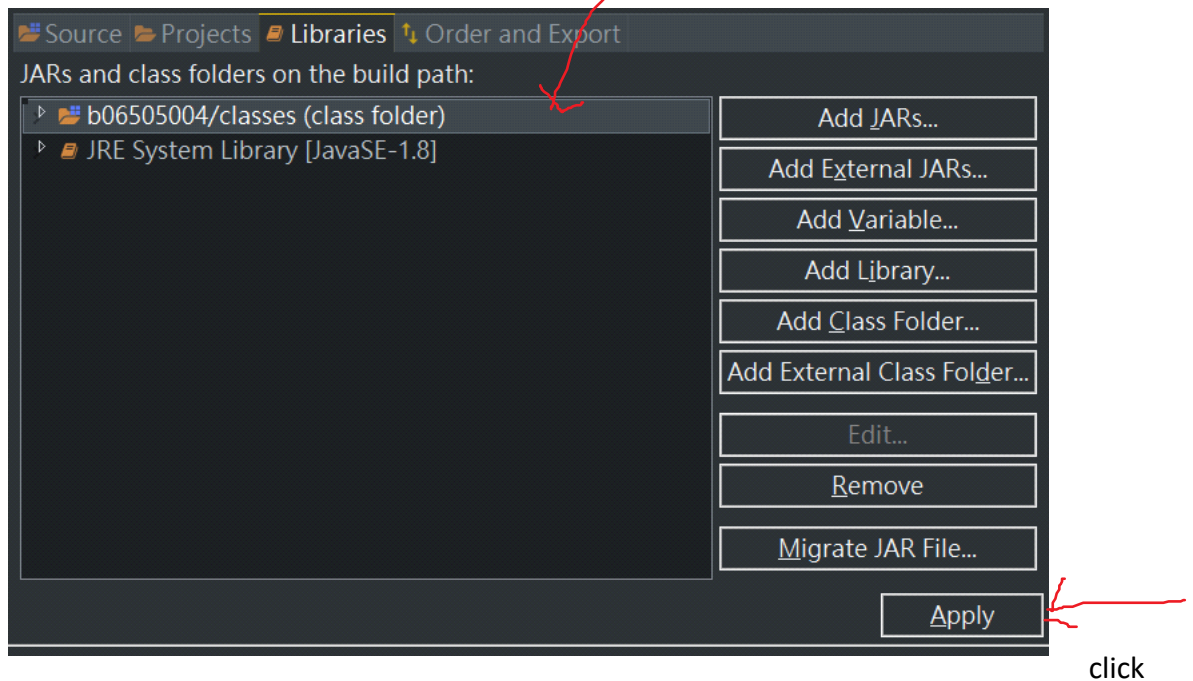

add class folder / add jars (根據需求)

選剛才創的資料夾

出現了 \(^\_^)/

以後就可以import .class / .jars 裡的東西
